**DETAILED ACTION**

***Claim Objections***

1. Claim 1 is objected to because of the following informalities: in order to make the claim clearer, it is suggested that the words --to measure-- be added directly before "the velocity" in line 5. Appropriate correction is required.
2. Claim 1 recites the limitation "said natural fluctuations" in line 5. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 01/75403 of Brown (Applicant's admitted prior art).

Regarding claims 1 and 4, Brown discloses a method for downhole flow measurement in a well, the method comprising installing a fiber optical distributed temperature sensor (DTS) system 62 along at least part of the length of an inflow region of the well and using the sensor to measure one or more fluctuations of the temperature of fluids flowing along different locations from the formation into the well and to measure the velocity (velocity is synonymous with linear flow rate; page 1, lines 28-30) at which at least one of said natural fluctuations migrates in a downstream direction through the well (Figs. 11, 13 and 14; pages 18-21).

Regarding claims 2 and 3, the DTS system is configured to track the downstream migration through the well of natural low frequency temperature variations down to about 0.5 Degrees Celsius (page 17, lines 4-9).

Regarding claim 5, the well produces oil (page 17, lines 17-20).

Regarding claims 6 and 7, the fluids flowing into the well comprise gaseous components and or components which at least partly evaporate in the inflow region and the fluid production rate of the well is cyclically varied over time by the opening of a production choke 55 (Fig. 13; page 24 line 34 through page 25, line 2).

### ***Conclusion***

5. The prior art made of record on form 892 and not relied upon is considered pertinent to applicant's disclosure.
